5

Summary

In order to align the optical components of a projection
apparatus (1), more particularly a rear projection appa-
10 ratus of a projection wall, wherein the projection appa-
ratus (1) comprises a light mixing rod (8), it is pro-
posed to arrange an alignment deflecting mirror (19) in
the illumination path of the imaging device (11) between
the lamp (3) and the light mixing rod (8), wherein said
15 alignment deflecting mirror (19) can be adjusted by means
of servo motors (23).
